## install sql odbc on suse

1. [官方網站安裝方法](#)好像找不到msodbcsql18, mssql-tools18
2. 所以找到了.rmp, 直接安裝

```
sudo zypper install https://packages.microsoft.com/sles/15/prod/msodbcsql18-18.1.2.1-1.x86_64.rpm
```

```
sudo zypper install https://packages.microsoft.com/sles/15/prod/mssql-tools18-18.1.1.1-1.x86_64.rpm
```

## 安裝 php7-devel

```
https://download.opensuse.org/repositories/devel:/languages:/php/openSUSE_Leap_15.4/devel:languages:php.repo
```

## sqlcmd 的用法

```
sqlcmd -S SMGSQL01 -U skyview -P Idced@11ic -d SkyView -C
```

```
select top(1) * from tghokobs_input;
```
